SKILLS

- HTML | CSS
- Java Script | Vue | Axios
- Java con Spring Boot
- SQL
- Git
- Postman
- PHP
- JQuery

EXPERIENCE

• Developer| E-commerce Chapter One

December 2023

I developed and coordinated a web application for book purchasing using the Scrum methodology. We created a user-friendly interface with JavaScript, HTML, and CSS. For the backend, I utilized Java in conjunction with Spring Boot. Users could search for books by name and/or category, add them to the cart, and proceed with the purchase.

• Developer| Homebanking MindBro

November 2023

I developed a web application individually, implementing my skills as a developer, working on both the front-end and back-end. The application provides an interface for logging in, opening bank accounts, transferring money, viewing all transfers associated with an account, applying for loans, and requesting credit and/or debit cards.

I used: HTML, CSS, JavaScript, Java with Spring Boot, and SQL.
